TARGET INSTRUMENT: R_75 Volatility Model

CORE PERFORMANCE METRICS

Total Settlements:	300	Calculated Profit Factor:	29.48
Win Accuracy:	91.7% (275W / 25L)	Max Peak Drawdown:	0.1%
Cumulative PnL:	\$211.60	Avg. PnL per Trade:	\$0.71

EQUITY CURVE PROGRESSION

PERFORMANCE MILESTONES (100-TRADE SEGMENTS)

SEGMENT	WIN RATE	NET PnL	REFINEMENT EFFICIENCY
Trades 1-60	91.7%	\$9.01	+110% [OK]
Trades 61-120	66.7%	\$3.15	+80% [OK]
Trades 121-180	100.0%	\$40.31	+120% [OK]
Trades 181-240	100.0%	\$75.92	+120% [OK]
Trades 241-300	100.0%	\$83.21	+120% [OK]

%	Mean Reversion (ADX<25) %	Trending (ADX>=25) %	%
100	100	100	100
90	90	90	90
80	80	80	80
70	70	70	70
60	60	60	60
50	50	50	50
40	40	40	40
30	30	30	30
20	20	20	20
10	10	10	10
0	0	0	0

[illegible]

2. ****Temporal Decay (Max Ticks):**** The ``maxTicksInTrade: 120`` parameter acts as a hard time-stop. In low-volatility regimes, trades can get trapped in a directional drift, forcing the system to close positions at a loss purely due to elapsed tick-count rather than structural invalidation.

```
``json
{
  "recommendedConfig": {
    "rsiOversoldThreshold": 25,
    "rsiOverboughtThreshold": 75,
    "bbPeriod": 20,
    "bbStd": 2.50,
    "maxTicksInTrade": 90,
    "minConfluenceScore": 4,
    "atrStopMultiplier": 2.65,
    "regimeAdxThreshold": 20
  }
}
```

Regime ADX Threshold (Reduce to 20): Lowering the filter from `25` to `20` aggressively locks out the mean-reversion engine at the very earliest signs of structural trend initiation, protecting the book from trend-continuation drawdowns.
