## CORE PERFORMANCE METRICS

|                    |                       |                           |        |
|--------------------|-----------------------|---------------------------|--------|
| Total Settlements: | 6100                  | Calculated Profit Factor: | 3.26   |
| Win Accuracy:      | 68.5% (4179W / 1921L) | Max Peak Drawdown:        | 12.9%  |
| Cumulative PnL:    | \$3680.85             | Avg. PnL per Trade:       | \$0.60 |

## EQUITY CURVE PROGRESSION

## PERFORMANCE MILESTONES (100-TRADE SEGMENTS)

| SEGMENT          | WIN RATE | NET PnL    | REFINEMENT EFFICIENCY |
|------------------|----------|------------|-----------------------|
| Trades 1-1220    | 57.4%    | \$225.88   | +69% [OK]             |
| Trades 1221-2440 | 12.4%    | \$-1129.72 | +10% [OK]             |
| Trades 2441-3660 | 77.3%    | \$818.25   | +93% [OK]             |
| Trades 3661-4880 | 95.5%    | \$1279.65  | +115% [OK]            |
| Trades 4881-6100 | 100.0%   | \$2486.79  | +120% [OK]            |

# SOVEREIGN NARRATIVE ADVISORY

*Cognitive Strategy Proposal & Adaptive Intelligence Logs*

## SOVEREIGN SYSTEM DIAGNOSTICS: COMPLETED

Analytic diagnostic compiled for high-frequency index models.

### 1. EXECUTIVE TELEMETRY CRITIQUE

The Sovereign engine demonstrated clean transaction flow across 6100 historical capture events.

Cumulative settlement yields are \$3680.85 with an established Profit Factor of 3.26. Capital drawdown metrics remain extremely healthy, registering a peak drop of 12.9%, well within institutional tolerances.

### 2. REGIME & SYSTEM GAINS ANALYSIS

Milestone segmentation indicates a continuous refinement of entry/exit boundaries. The transition from baseline volatility stages (Epoch 1) to the current active interval exhibits a win factor improvement of +4.5% efficiency.

Bollinger band filters effectively prevented top-edge fades in trending models, but range bounds showed compression.

### 3. CALIBRATED RECOMMENDATION PARAMETERS

- RSI Lower Trigger: Adjust to 27 (Safety Gated)
- RSI Upper Trigger: Adjust to 73 for high frequency capture response.
- ATR Stop Multiplier: Calibrate strictly to  $2.164303275144119 \times 10^{25}x$  to limit trailing hazard vectors.
