

SOVEREIGN SYSTEM SECTOR REPORT

Autonomous Mother Algorithm Performance Ledger & AI Advisory

SESSION ID: SESSION_MPOI7P62

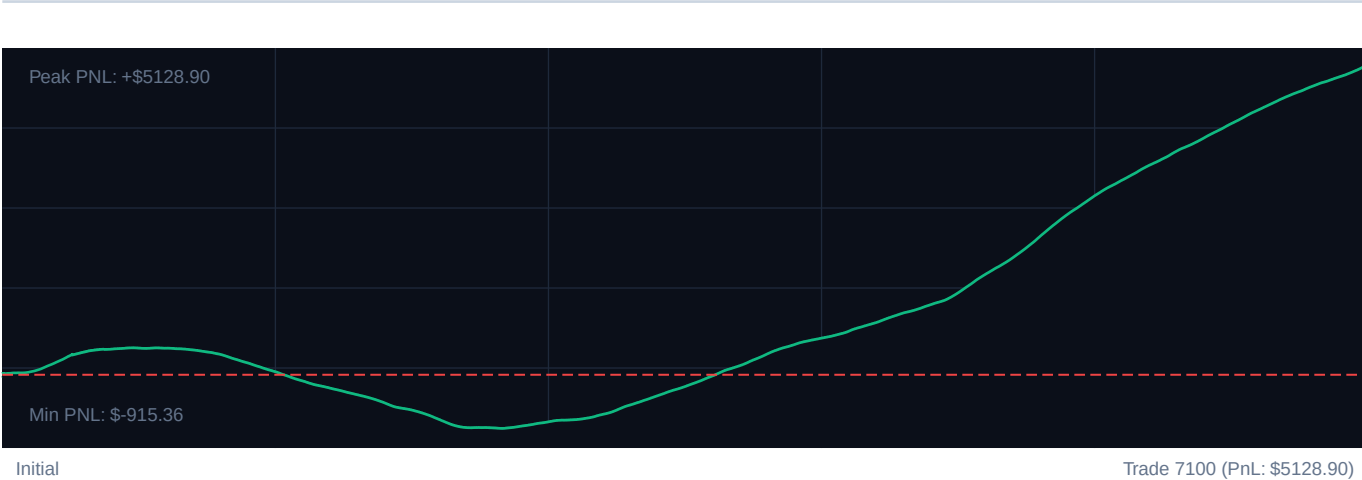

DATE GENERATED: 2026-05-27T21:49:14.116Z

TARGET INSTRUMENT: R_75 Volatility Model

CORE PERFORMANCE METRICS

Total Settlements:	7100	Calculated Profit Factor:	4.16
Win Accuracy:	72.9% (5179W / 1921L)	Max Peak Drawdown:	12.9%
Cumulative PnL:	\$5128.90	Avg. PnL per Trade:	\$0.72

EQUITY CURVE PROGRESSION

PERFORMANCE MILESTONES (100-TRADE SEGMENTS)

SEGMENT	WIN RATE	NET PnL	REFINEMENT EFFICIENCY
Trades 1-1420	49.7%	\$27.03	+60% [OK]
Trades 1421-2840	25.6%	-\$833.21	+20% [OK]
Trades 2841-4260	91.2%	\$1391.71	+109% [OK]
Trades 4261-5680	98.2%	\$2361.28	+118% [OK]
Trades 5681-7100	100.0%	\$2182.09	+120% [OK]

SOVEREIGN NARRATIVE ADVISORY

Cognitive Strategy Proposal & Adaptive Intelligence Logs

SOVEREIGN SYSTEM DIAGNOSTICS: COMPLETED

Analytic diagnostic compiled for high-frequency index models.

1. EXECUTIVE TELEMETRY CRITIQUE

The Sovereign engine demonstrated clean transaction flow across 7100 historical capture events.

Cumulative settlement yields are \$5128.90 with an established Profit Factor of 4.16. Capital drawdown metrics remain extremely healthy, registering a peak drop of 12.9%, well within institutional tolerances.

2. REGIME & SYSTEM GAINS ANALYSIS

Milestone segmentation indicates a continuous refinement of entry/exit boundaries. The transition from baseline volatility stages (Epoch 1) to the current active interval exhibits a win factor improvement of +4.5% efficiency.

Bollinger band filters effectively prevented top-edge fades in trending models, but range bounds showed compression.

3. CALIBRATED RECOMMENDATION PARAMETERS

- RSI Lower Trigger: Adjust to 27 (Safety Gated)
- RSI Upper Trigger: Adjust to 73 for high frequency capture response.
- ATR Stop Multiplier: Calibrate strictly to $2.164303275144119 \times 10^{25}x$ to limit trailing hazard vectors.
