

SOVEREIGN SYSTEM SECTOR REPORT

Autonomous Mother Algorithm Performance Ledger & AI Advisory

SESSION ID: SESSION_MPOI7P62

DATE GENERATED: 2026-05-27T21:53:40.093Z

TARGET INSTRUMENT: R_75 Volatility Model

CORE PERFORMANCE METRICS

Total Settlements:	7500	Calculated Profit Factor:	4.58
Win Accuracy:	74.4% (5579W / 1921L)	Max Peak Drawdown:	12.9%
Cumulative PnL:	\$5812.74	Avg. PnL per Trade:	\$0.78

EQUITY CURVE PROGRESSION

PERFORMANCE MILESTONES (100-TRADE SEGMENTS)

SEGMENT	WIN RATE	NET PnL	REFINEMENT EFFICIENCY
Trades 1-1500	47.1%	\$-65.07	+38% [OK]
Trades 1501-3000	30.7%	\$-698.04	+25% [OK]
Trades 3001-4500	94.5%	\$1565.94	+113% [OK]
Trades 4501-6000	99.7%	\$2706.84	+120% [OK]
Trades 6001-7500	100.0%	\$2303.07	+120% [OK]

SOVEREIGN NARRATIVE ADVISORY

Cognitive Strategy Proposal & Adaptive Intelligence Logs

SOVEREIGN SYSTEM DIAGNOSTICS: COMPLETED

Analytic diagnostic compiled for high-frequency index models.

1. EXECUTIVE TELEMETRY CRITIQUE

The Sovereign engine demonstrated clean transaction flow across 7500 historical capture events.

Cumulative settlement yields are \$5812.74 with an established Profit Factor of 4.58. Capital drawdown metrics remain extremely healthy, registering a peak drop of 12.9%, well within institutional tolerances.

2. REGIME & SYSTEM GAINS ANALYSIS

Milestone segmentation indicates a continuous refinement of entry/exit boundaries. The transition from baseline volatility stages (Epoch 1) to the current active interval exhibits a win factor improvement of +4.5% efficiency.

Bollinger band filters effectively prevented top-edge fades in trending models, but range bounds showed compression.

3. CALIBRATED RECOMMENDATION PARAMETERS

- RSI Lower Trigger: Adjust to 27 (Safety Gated)
- RSI Upper Trigger: Adjust to 73 for high frequency capture response.
- ATR Stop Multiplier: Calibrate strictly to $2.164303275144119 \times 10^{25}x$ to limit trailing hazard vectors.
