## CORE PERFORMANCE METRICS

|                    |                       |                           |        |
|--------------------|-----------------------|---------------------------|--------|
| Total Settlements: | 10500                 | Calculated Profit Factor: | 10.67  |
| Win Accuracy:      | 81.7% (8579W / 1921L) | Max Peak Drawdown:        | 12.9%  |
| Cumulative PnL:    | \$15713.37            | Avg. PnL per Trade:       | \$1.50 |

## EQUITY CURVE PROGRESSION

## PERFORMANCE MILESTONES (100-TRADE SEGMENTS)

| SEGMENT           | WIN RATE | NET PnL   | REFINEMENT EFFICIENCY |
|-------------------|----------|-----------|-----------------------|
| Trades 1-2100     | 38.4%    | \$-590.90 | +31% [OK]             |
| Trades 2101-4200  | 72.2%    | \$1137.51 | +87% [OK]             |
| Trades 4201-6300  | 97.9%    | \$3451.72 | +117% [OK]            |
| Trades 6301-8400  | 100.0%   | \$4721.67 | +120% [OK]            |
| Trades 8401-10500 | 100.0%   | \$6993.37 | +120% [OK]            |

# SOVEREIGN NARRATIVE ADVISORY

*Cognitive Strategy Proposal & Adaptive Intelligence Logs*

## SOVEREIGN SYSTEM DIAGNOSTICS: COMPLETED

Analytic diagnostic compiled for high-frequency index models.

### 1. EXECUTIVE TELEMETRY CRITIQUE

The Sovereign engine demonstrated clean transaction flow across 10500 historical capture events.

Cumulative settlement yields are \$15713.37 with an established Profit Factor of 10.67. Capital drawdown metrics remain extremely healthy, registering a peak drop of 12.9%, well within institutional tolerances.

### 2. REGIME & SYSTEM GAINS ANALYSIS

Milestone segmentation indicates a continuous refinement of entry/exit boundaries. The transition from baseline volatility stages (Epoch 1) to the current active interval exhibits a win factor improvement of +4.5% efficiency.

Bollinger band filters effectively prevented top-edge fades in trending models, but range bounds showed compression.

### 3. CALIBRATED RECOMMENDATION PARAMETERS

- RSI Lower Trigger: Adjust to 27 (Safety Gated)
- RSI Upper Trigger: Adjust to 73 for high frequency capture response.
- ATR Stop Multiplier: Calibrate strictly to  $2.164303275144119e+25x$  to limit trailing hazard vectors.
