

SOVEREIGN SYSTEM SECTOR REPORT

Autonomous Mother Algorithm Performance Ledger & AI Advisory

SESSION ID: SESSION_MPOI7P62

DATE GENERATED: 2026-05-27T22:29:13.745Z

TARGET INSTRUMENT: R_75 Volatility Model

CORE PERFORMANCE METRICS

Total Settlements:	10700	Calculated Profit Factor:	10.92
Win Accuracy:	82.0% (8779W / 1921L)	Max Peak Drawdown:	12.9%
Cumulative PnL:	\$16115.37	Avg. PnL per Trade:	\$1.51

EQUITY CURVE PROGRESSION

PERFORMANCE MILESTONES (100-TRADE SEGMENTS)

SEGMENT	WIN RATE	NET PnL	REFINEMENT EFFICIENCY
Trades 1-2140	38.3%	\$-619.27	+31% [OK]
Trades 2141-4280	72.8%	\$1217.21	+87% [OK]
Trades 4281-6420	99.2%	\$3596.90	+119% [OK]
Trades 6421-8560	100.0%	\$5164.71	+120% [OK]
Trades 8561-10700	100.0%	\$6755.82	+120% [OK]

SOVEREIGN NARRATIVE ADVISORY

Cognitive Strategy Proposal & Adaptive Intelligence Logs

SOVEREIGN SYSTEM DIAGNOSTICS: COMPLETED

Analytic diagnostic compiled for high-frequency index models.

1. EXECUTIVE TELEMETRY CRITIQUE

The Sovereign engine demonstrated clean transaction flow across 10700 historical capture events.

Cumulative settlement yields are \$16115.37 with an established Profit Factor of 10.92. Capital drawdown metrics remain extremely healthy, registering a peak drop of 12.9%, well within institutional tolerances.

2. REGIME & SYSTEM GAINS ANALYSIS

Milestone segmentation indicates a continuous refinement of entry/exit boundaries. The transition from baseline volatility stages (Epoch 1) to the current active interval exhibits a win factor improvement of +4.5% efficiency.

Bollinger band filters effectively prevented top-edge fades in trending models, but range bounds showed compression.

3. CALIBRATED RECOMMENDATION PARAMETERS

- RSI Lower Trigger: Adjust to 27 (Safety Gated)
- RSI Upper Trigger: Adjust to 73 for high frequency capture response.
- ATR Stop Multiplier: Calibrate strictly to $2.164303275144119e+25x$ to limit trailing hazard vectors.
