Autonomous Mother Algorithm Performance Ledger & AI Advisory

SESSION ID: SESSION_MPOI7P62

DATE GENERATED: 2026-05-27T23:00:20.044Z

TARGET INSTRUMENT: R_75 Volatility Model

CORE PERFORMANCE METRICS

Total Settlements:	13500	Calculated Profit Factor:	11.15
Win Accuracy:	82.3% (11110W / 2390L)	Max Peak Drawdown:	12.9%
Cumulative PnL:	\$19907.70	Avg. PnL per Trade:	\$1.47

EQUITY CURVE PROGRESSION

PERFORMANCE MILESTONES (100-TRADE SEGMENTS)

SEGMENT	WIN RATE	NET PnL	REFINEMENT EFFICIENCY
Trades 1-2700	36.1%	\$-876.34	+29% [OK]
Trades 2701-5400	92.7%	\$3157.45	+111% [OK]
Trades 5401-8100	100.0%	\$5361.38	+120% [OK]
Trades 8101-10800	100.0%	\$8693.30	+120% [OK]
Trades 10801-13500	82.6%	\$3571.91	+99% [OK]

SOVEREIGN NARRATIVE ADVISORY

Cognitive Strategy Proposal & Adaptive Intelligence Logs

SOVEREIGN SYSTEM DIAGNOSTICS: COMPLETED

Analytic diagnostic compiled for high-frequency index models.

1. EXECUTIVE TELEMETRY CRITIQUE

The Sovereign engine demonstrated clean transaction flow across 13500 historical capture events.

Cumulative settlement yields are \$19907.70 with an established Profit Factor of 11.15. Capital drawdown metrics remain extremely healthy, registering a peak drop of 12.9%, well within institutional tolerances.

2. REGIME & SYSTEM GAINS ANALYSIS

Milestone segmentation indicates a continuous refinement of entry/exit boundaries. The transition from baseline volatility stages (Epoch 1) to the current active interval exhibits a win factor improvement of +4.5% efficiency.

Bollinger band filters effectively prevented top-edge fades in trending models, but range bounds showed compression.

3. CALIBRATED RECOMMENDATION PARAMETERS

- RSI Lower Trigger: Adjust to 27 (Safety Gated)
- RSI Upper Trigger: Adjust to 73 for high frequency capture response.
- ATR Stop Multiplier: Calibrate strictly to $9.219838168703331e+30x$ to limit trailing hazard vectors.
